

INTERLATE DIGITAL READINESS ASSESSMENT

Know where
you stand with
Interlate's
**DIGITAL
READINESS
ASSESSMENT**

With so many digital initiatives and opportunities available to the mining industry today, it's often difficult for mining companies to benchmark their operations from a digital perspective.

Interlate's Digital Readiness Assessment (DRA) is a dedicated service designed to give mining companies the information needed to understand their organisation's digital maturity and subsequent ability to undertake digital transformation.

DRA assesses current technology and data infrastructure and then completes a series of surveys, interviews and analyses to provide an actionable roadmap. That roadmap includes recommendations on how your operational team can extract further value from existing plant data and what additional digital capability is required to increase your company's digital maturity.

The DRA process

Digital analysis and transformation can seem overwhelming, so we have established a process that is simple, fast, safe and effective. Interlate's DRA is based on 3 fundamental phases:

1 REVIEW OF DATA INFRASTRUCTURE

Desktop research into the operating assets, examining the level of data generating instruments, data gathering processes and reviewing the use of the data currently captured.

2 SITE VISITS

Interlate team visits the operation to conduct interviews, inspect the processing plant and understand the operational context related to the data infrastructure.

3 REPORTING AND ROADMAP DEFINITION

Interlate collates the information gathered during the previous phases, generating a detailed report which includes a roadmap to clearly identify the stages and requirements in your company's digital transformation journey.

Key operational features and benefits

The true value of Interlate's DRA service lies in creating a knowledge base and a transformation plan. By understanding current digital capabilities and potential transformational benefits, mining companies can use the DRA to formulate stronger digitalisation strategies.

Key operational features and benefits include:

- ✓ A simple, low cost, 2-week engagement
- ✓ A benchmarked analysis of current digital capabilities and skills
- ✓ Insights on how to use, adopt and integrate digital technologies
- ✓ Roadmap and transformational plan highlighting systems and technologies to be adopted and the required investment areas
- ✓ Recommended timeline for digitalisation
- ✓ Clearly defined path on how to create value from data
